## **Abstracts**

Remote Magnetic Catheter Systems has been manufactured in such a manner that enhance patient care in atrial arrhythmia diagnosis and treatment. The remote magnetic catheter systems categorized into three main parts on the basis of its functionality, In the first part two large permanent magnets that are installed on both sides of the procedure table in the electrophysiology laboratory. These magnets are used to create an external magnetic field that will direct intra-cardiac devices such as ablation catheters. Secondly, a diagnostic mapping and ablation catheter that has a small magnet embedded in its tip and the third part of the systems is a computer that allows for the user to control and direct magnetic fields. Remote magnetic catheter systems have advantages over the conventional method. In remote magnetic catheter systems, the catheter stability plays the pivotal role to convert the complex ablation procedure into simplest one. Remote magnetic catheter systems enhance the efficacy and accuracy of procedure as well as its also help to reduce chances of radiation exposure to physicians, staff and patient.

The Remote Magnetic Catheter Systems market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
