## Abstracts

Reservoir simulation is an area of reservoir engineering in which computer models are used to predict the flow of fluids (typically, oil, water, and gas) through porous media. Reservoir Simulation Software is a kind of software used to simulate the migration, physical and chemical processes of underground oil, gas and water under various complex geological conditions. In the reservoir simulations usually, the oil and gas companies depend on simulation and modeling software to produce the best representation of reservoirs of oil and gas, all the usage of equipment as well as resistivity and environmental effects. That software has a lot of benefits like they help in predicting production results and evaluate the risk level.
