Abstracts

Dry construction is a specialist method of interior construction that uses industrially prefabricated construction systems. This system consists of two basic construction elements; lining board and load-bearing construction, that together form a functional, static, unit. It does not require any additional drying time. Plywood and gypsum board are used in dry constructions instead of concrete and bricks. This offers moisture resistance, reduction in construction time, fire safety, thermal and sound insulation, and ease of the installation.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Residential Dry Construction market covering all its essential aspects.
