Abstracts

Respiratory humidification is a method of artificial warming and humidifying of respiratory gas for mechanically ventilated patients. It is a method of artificially conditioning respiratory gas for the patient during therapy. Humidifiers are used in respiratory and acute care (RAC) and for the treatment of sleep apnea. Respiratory Humidification includes invasive ventilation, non-invasive ventilation, and HFNC, which all help humidify air delivered to patients with some form of severe respiratory distress in the hospital setting, such as COPD, pneumonia and influenza, or congestive heart failure.
