## **Abstracts**

Reverse Osmosis (RO) system is the equipment system that uses a semi-permeable membrane to remove dissolved salts or organic molecules from water. The water is pushed under pressure through the membrane, which allows the passage of water molecules but prevents the dissolved salts and bacteria from passing through.

Based on the Reverse Osmosis (RO) Systems market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
