Abstracts

A reverse vending machine is a device that accepts used (empty) beverage containers and returns money to the user. The machines are popular in places that have mandatory recycling laws or container deposit legislation. In some places, bottlers paid funds into a centralized pool to be disbursed to people who recycled the containers. Any excess funds were to be used for general environmental cleanup. In other places, such as Norway, the state mandated that a vendor pay for recycled bottles, but left the system in the hands of private industry.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Reverse Vending Machine market covering all its essential aspects.
