## Abstracts

RFID stands for radio frequency identification. The way this works is that they've got electronic chips (also called tags) inside them that let you collect and track data. It is a technology that is often used in military operations and when tagging pets and animals. RFID stands for Radio Frequency Identification, though that doesn't tell us very much. Basically, RFID products use electromagnetic fields to transfer data and track information. Like barcodes, RFID allows specific tracking data to be transferred quickly and accurately. But unlike a barcode, a RFID chip doesn't need to be visible or aligned with a scanner, which makes it much faster and more efficient to use.
