## **Abstracts**

RNA is a rather versatile technology and offers a number of advantages. RNA lacks genomic integration and its use results in transient expression of the encoded protein. This favorable safety profile makes RNA especially attractive for vaccines and gene editing. RNA is well defined chemically which ensures reproducible manufacturing at high yield, purity and activity. Improvements of lipid nanoparticle formulations as a vehicle for in vivo systemic delivery of RNA has greatly favored the development of in vivo transfection strategies.

The RNA Vaccines market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
