Abstracts

The Robot Operating System (ROS) is more than just an operating system; it is a robotic middleware, a collection of software frameworks, and a collection of tools that can be used to develop or build robotic systems. It provides a structured communication layer above the host operating system of the hybrid computing cluster. ROS is language neutral and can be programmed in a variety of languages. ROS works at the messaging layer, which consists of programming tools and code that help the projector run programming code and the infrastructure that runs it, such as messages that are passed between processes. ROS is designed to work with different components and subsystems that use different programming languages.

Based on the Robot Operating System (ROS) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
