Abstracts

Assignment includes the process from receiving a prescription to issuing a drug. This is an important process for patient care in a healthcare facility because all other processes prior to dispensing a prescription drug will be redundant if the drug is in error, such as an incorrect dose or improper packaging. As hospitals and retail pharmacies increase their investment in pharmacy automation solutions, the range of products such as robotic pharmacy prescription drug dispensing systems will increase significantly. Based on the Robotic Prescription Dispensing Systems market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.
