## Abstracts

Robotic vision is used in industries for improved sanitation, correct packaging, and material handling operations due to strict government regulations and increasing public awareness regarding food and beverage safety. Robotic vision ensures quality and safety, prevents defective products from entering the supply chain, and facilitates product traceability. Robotic vision performs these applications reliably and consistently and is a superior alternative to photoelectric sensor-based application. Apart from this, many companies are accepting it due to the value it brings to their operations, that is, value in the form of improved product quality, more manufacturing flexibility, and higher throughput.
