Abstracts

With high appeal in a wide range of industrial products, copper is viewed as a very versatile material. Copper foils are sheets of copper which are obtained via hammering, electrolysis, and rolling. Copper foils are produced by very specific manufacturing processes within the foil mill which includes both hot and cold rolling. They are available in different units of thickness depending on its application. In addition, rolled copper foil is more flexible than electrolytic copper foil, and has stable mechanical properties under high temperature conditions. It is an optimal material for high density mounting of electronic devices.
