Abstracts

Roof coatings are monolithic fluids that are applied to roofing membranes. Due to its elastic properties, it is able to stretch and restore its original shape. Roof coating is the initial layer of the surface, it is directly affected by sunlight infrared and ultraviolet, hail and other factors that may cause roof damage. Therefore, it is an excellent barrier to direct radiation and other natural conditions. Roof coatings not only reduce and control room temperature but also keep the room warm during the winter. Roof coatings protect the surface from direct heat, reducing the chance of generating heat below the roof surface. This ultimately reduces the energy consumption and utilization of HVAC equipment.

Based on the Roof Coating market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
