Abstracts

Rupture discs are safety devices with precisely defined breaking points, which respond to a specific pressure and are used for pressure relief in a diverse range of applications. They are used to protect against overpressure or vacuum within a process, for the protection of man, environment and machine. Originally a very simple solution, rupture discs have evolved enormously in response to growing industry requirements such as alternating pressures or higher process temperatures, and the increasing technological innovation of processes in recent years. The greatest advantage of rupture discs over electronic, pneumatic, or spring-loaded safety systems is the failsafe performance of rupture discs - this makes them the most economical and most important safety device in industrial enterprises.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Rupture Disc market covering all its essential aspects.
