## Abstracts

Saflufenacil is an herbicide of the pyrimidinedione chemical class used to control annual broadleaf weeds in soybeans and corn. It was developed by BASF and is marketed under the Kixor trademark. Saflufenacil works by inhibiting protoporphyrinogen IX oxidase (PPO), resulting in plant accumulation of protoporphyrin IX (proto) and H<sub>2</sub>O<sub>2</sub>; inhibiting PPO formation results in prevention of chlorophyll, heme, and cytochrome synthesis; also, proto accumulation causes lipid peroxidation, resulting in rapid loss of membrane integrity and function; only slight increases of proto and H<sub>2</sub>O<sub>2</sub> occur in corn.

Based on the Saflufenacil market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
