## Abstracts

SAN switch is normally a Fibre Channel (FC) switch, which complies with Fibre Channel protocol. The FC switch examines the data packet header, determines the origin and destination of computing devices, and sends the packet to the intended storage system. A FC switch is designed for high-performance network with low latency and lossless data transmission. On the other hand, a SAN switch can also be an Ethernet switch. In the ideal situation, the Ethernet-based SAN switch would be devoted to storage traffic in an Internet Protocol (IP) SAN so as to maintain performance predictability. In the meanwhile, SAN switch can be combined to build large SAN structures that interconnect thousands of servers and storage ports.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the SAN Switches market covering all its essential aspects.
