Abstracts

SAN switch is normally a Fibre Channel (FC) switch, which complies with Fibre Channel protocol. The FC switch examines the data packet header, determines the origin and destination of computing devices, and sends the packet to the intended storage system. A FC switch is designed for high-performance network with low latency and lossless data transmission. On the other hand, a SAN switch can also be an Ethernet switch. In the ideal situation, the Ethernet-based SAN switch would be devoted to storage traffic in an Internet Protocol (IP) SAN so as to maintain performance predictability. In the meanwhile, SAN switch can be combined to build large SAN structures that interconnect thousands of servers and storage ports.

The SAN Switches market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
