## Abstracts

SAN switch is normally a Fibre Channel (FC) switch, which complies with Fibre Channel protocol. The FC switch examines the data packet header, determines the origin and destination of computing devices, and sends the packet to the intended storage system. A FC switch is designed for high-performance network with low latency and lossless data transmission. On the other hand, a SAN switch can also be an Ethernet switch. In the ideal situation, the Ethernet-based SAN switch would be devoted to storage traffic in an Internet Protocol (IP) SAN so as to maintain performance predictability. In the meanwhile, SAN switch can be combined to build large SAN structures that interconnect thousands of servers and storage ports.

Based on the SAN Switches market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
