Abstracts

Screen printing is a printing technique in which a web is used to transfer ink onto a substrate, except for areas where the ink is impermeable by blocking the template. The blade or squeegee moves over the screen to fill the open mesh with ink, and then the reverse stroke causes the screen to momentarily contact the substrate along the line of contact. This causes the ink to wet the substrate and be pulled out of the mesh as the screen bounces back after the blade passes. Print one color at a time, so you can use multiple screens to produce multicolor images or designs
