## **Abstracts**

Secure Sockets Layer (SSL) Certification is used for setting up a secure connection between a web server and a web browser. This process of setting up a secure connection is known as SSL handshake. SSL handshake is a public key, and the private key is used to encrypt and decrypt the data. This helps in secure transmission of data between a web server and a web browser. An SSL certificate is provided by a certificate authority (CA). Its work is to authenticate and validate the organization providing a web server. After verification, this certificate is installed on the web server of the organization.
