Abstracts

Security as a service (SECaaS) is a business model in which a service provider integrates their security services into a corporate infrastructure on a subscription basis more cost effectively than most individuals or corporations can provide on their own, when total cost of ownership is considered. SECaaS is inspired by the 'software as a service' model as applied to information security type services and does not require on-premises hardware, avoiding substantial capital outlays . These security services often include authentication, anti-virus, anti-malware/spyware, intrusion detection, Penetration testing and security event management, among others.
