Abstracts

Seed coating, also known as seed treatment or seed dressing, is a process in which seeds are directly coated with chemicals and fertilizers, repulsive agents and crop protection chemicals to enhance the seed performance. This process protects the seed from pathogens. Seed coating results in rapid multiplication and timely supply of crop at cheaper price. The material offers high yield per hectare, low seeding rate, and multicomponent product, which augments the development of the seed coating material across the globe. Moreover, growth of agriculture in the developing economies, also contributes to the overall market growth.
