Abstracts

An SSD is a solid-state disk or an electronic disk that is used for data storage and is built using semiconductors. It has a same input/output interface design as hard disk drives (HDDs) and stores data in solid state memory. SSDs are made of silicon microchips and store data electronically. These devices use dynamic random access memory (DRAM) or NAND-based flash memory to store data. The lack of moving parts reduces the risk of mechanical failures of SSDs, enabling data transfer at higher speeds. In addition, they are suited for harsh environments, extreme shock, high altitude, and consume less power, thus increasing consistency.
