## Abstracts

A serial server is a networking device that transfers data between an Ethernet local area network and a computer's or a device's serial port (COM port). The main purpose of a serial server is to allow a serial device such as a printer, scanner or climate control system to be used in a network without relying on the serial port of a computer for connectivity. This allows any serial device to be connected to the network and accessed from anywhere, including from the Internet.
