## Abstracts

Sheet molding compound (SMC) or sheet molding compound is an easy-to-mold glass fiber reinforced polyester material, mainly used for compression molding.

SMC is both a process and a reinforced composite. This is done by dispersing long strands (usually > 1') chopped fibers (usually glass or carbon fibers) in a thermosetting resin bath (usually a polyester resin, vinyl ester resin or epoxy). Longer fibers in SMC have better strength properties than standard bulk molding compound (BMC) products. Typical applications include demanding electrical applications, corrosion resistance requirements, low cost structural components, automotive and transportation.
