Abstracts

Sheet molding compound (SMC) or sheet molding compound is an easy-to-mold glass fiber reinforced polyester material, mainly used for compression molding.

SMC is both a process and a reinforced composite. This is done by dispersing long strands (usually > 1') chopped fibers (usually glass or carbon fibers) in a thermosetting resin bath (usually a polyester resin, vinyl ester resin or epoxy). Longer fibers in SMC have better strength properties than standard bulk molding compound (BMC) products. Typical applications include demanding electrical applications, corrosion resistance requirements, low cost structural components, automotive and transportation.

Based on the Sheet Molding Compound (SMC) market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the country-wise government.
