Abstracts

Shipbuilding is the formal name given to the construction of marine vessels.

Shipbuilding takes place in shipyards that are built specifically for the construction of marine vessels. Normally, once the initial design and detailed design are completed, the next appropriate step is to actually build the ship, and this is performed by specialist engineers, marine experts and boat builders. Shipbuilding is relatively large in scope and includes every stage of construction, after the designs have been finalized. In addition to construction, ship repairs and maintenance are also performed in a shipyard and will typically be conducted by the same specialists – shipbuilders, marine specialists and industry construction experts.
