## Abstracts

The single frequency laser, that is, the single longitudinal mode laser, is characterized in that the output laser mode satisfies both the single transverse mode and the single longitudinal mode, and only a single longitudinal mode is oscillated inside the cavity, and the output light intensity exhibits a Gaussian distribution. In addition to the good monochromaticity and directionality of the laser itself, single-frequency lasers have the characteristics of long coherence length and narrow spectral line width that are difficult to achieve with ordinary lasers. It has a wide range of applications in the fields of laser radar, laser ranging, laser remote sensing, laser medical, spectroscopy, optical frequency standards and nonlinear optical frequency conversion.

Based on the Single Frequency Lasers market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
