Liquefied natural gas (LNG) is natural gas in its, liquid form. The gas is cooled at -160°C to convert it into an odorless, colorless liquid, that can be again re-gasified at end use destination. small scale LNG refers to the direct use of LNG in its liquid form, as opposed to the traditional model of regasification and subsequent introduction into the gas transmission grid. Small scale liquefaction plants have a production capacity of fewer than 500 000 tpy and supply end-users in places where traditional infrastructure does not reach, or to consumers requiring liquid fuel.
