Abstracts

A drone can be classified as an aircraft without a human on-board. These are also called unmanned aerial vehicles (UAVs). Drones are typically controlled remotely by a pilot; however, some versions exist that can fly autonomously. These drones could vary in size and shape, but the core elements which are motor sensors, microcontroller and battery are fundamentally the same. Created as a cheaper and safer alternative to manned aircrafts, drones are used extensively for both commercial and military purposes.
