Abstracts

A smart tracker is a device that functions on Bluetooth, GPS, and cellular technology. The device is paired with an app on the smartphone and is used to find or locate missing items. This gap in the market has been fulfilled by smart trackers, which are miniaturized devices working on Bluetooth or GPS technology to locate items that have been misplaced. This device also notifies an individual if he or she leaves behind any item. Geo-fencing technology is used to provide alerts to the individual, notifying them when they get too far from their belongings so that these items can be retrieved before it is too late.
