Abstracts

The anhydrous sodium metasilicate has uniform particles, high specific surface area and high oil absorption value, which is beneficial to remove oil stains; zero water sodium metasilicate total alkali and total silica content 94%, compared with hydrated silicon. The binding capacity of Mg ions plays an important role in promoting hard water softening, adjusting and stabilizing pH, improving surfactant performance, improving detergency, dispersing eluted dirt and maintaining good powder structure; Sodium metasilicate does not precipitate crystal water, exhibits special compatibility and stability to organic chlorine, peroxide, bleaching synergist in detergent, and the cleaning effect is obviously better than hydrated silicon. It is equipped with various kinds of lotion, metal surface treatment, as well as plastic water retention agent raw materials, degreasing, textile printing and dyeing auxiliary and paper deinking agent.
