Abstracts

Sodium permanganate is a purplish-colored, inorganic salt compound, which is primarily available in aqueous form as a monohydrate. It is miscible in water, ether, ethanol, and liquid chlorine. Sodium permanganate offers high concentration of permanganate ions. Owing to high solubility in water, it is used for etching of plastic parts, as etching requires high concentration of permanganate ions. Sodium permanganate is also used for water treatment and soil treatment, as it is capable of degrading phenols, BTEX, chlorinated ethenes, and PAHS and removing hydrogen sulfide. Moreover, since it readily dissolves in water, it is used in water treatment plants, for controlling the odor and taste issues. It is often used as an oxidizing agent in the manufacture of chemical intermediates. Other uses of sodium permanganate include metal surface treatment and metal cleaning. Sodium permanganate is a strong and better substitute for potassium chloride, in terms of chemical properties such as miscibility and chemical reactivity. However, it is comparatively costlier to produce.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Sodium Permanganate market covering all its essential aspects.
