## Abstracts

Sodium sulfur battery is a type of molten-salt battery made from liquid sodium and sulfur. This type of battery possesses high energy density, high efficiency of charge or discharge and long-life cycle. Because of the operating temperatures of 300 to 350° and the highly corrosive nature of the sodium polysulfides, such cells are primarily suitable for large-scale non-mobile applications such as grid energy storage.

Based on the Sodium-Sulfur Battery market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
