Abstracts

The cross section of the solar panel is divided into five layers from top to bottom: photovoltaic glass, EVA, solar cells, EVA and backplane. The solar backplane is located on the back of the solar panel, which protects and supports the solar panel and has reliable insulation, water resistance and aging resistance. The solar cell backplane plays an insulating and protective role for solar photovoltaic cells. There are many kinds of solar cell backplanes on the market, with a design life of 25 years and a design life of 30 years for transparent backplanes.
