Abstracts

Solar cell paste is an electronic paste used to produce crystalline silicon solar cells. It can be divided into a front sol slurry, a back-silver paste and an aluminum paste. The front conductive paste collects the electricity generated by the solar cells, and then pastes the collected energy to the system. This slurry has a crucial influence on the conversion efficiency of the battery and therefore plays an important role in the performance cost ratio of the crystalline silicon solar cell. These conductive pastes account for 30% to 40% of the cost of manufacturing a single solar cell, and any small change in the slurry will have an impact on conversion efficiency.

The Solar Cell Paste market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
