Abstracts

A Solar Microinverter and Power Optimizer are plug-and-play devices used in photovoltaics, that convert direct current (DC) generated by a single solar module to alternating current (AC).

Solar Microinverters and Power Optimizers carry out the same task within a solar panel system as they convert direct current (DC) energy into the alternate current (AC) energy that can be used in home. Both of them can monitor the performance of individual solar panels, rather than the solar panel system as a whole. Microinverters and power optimizers improve performance for solar panels on complicated roofs, or roofs that experience marginal shading during the day.

Based on the Solar Microinverter and Power Optimizer market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
