Abstracts

A solar PV system, also known as a solar power system is designed to provide usable solar power by means of PVs. PVs use a semiconductor material to convert sunlight into electricity. A typical solar PV system consists of an arrangement of several components, including solar panels that absorb and convert sunlight into electricity, a solar inverter to convert the electric current from DC to AC, and other electrical accessories and cabling to set up a working solar power system. A solar PV system can range from small-scale rooftop mounted system typically utilized in residential and commercial buildings to large utility-scale ground mounted systems, which generate thousands of MW of electricity. Solar PV systems can be grid-connected or decentralized/off-grid installations in remote locations. Off-grid solar power systems can be standalone or hybrid systems coupled with other sources of energy, such as wind power.

Based on the Solar PV Systems market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
