Abstracts

A solar photovoltaic (PV) tracker is a device that orients solar panels or heliostats toward the Sun. A solar PV tracker is used in solar panels, heliostats, and parabolic troughs to align them in such a position toward the sun so as to collect solar energy in the most optimal angle, thereby increasing the efficiency of PV systems. Fixed-mounted solar panels may lose their efficiency when the Sun passes to the less than optimal angle. A solar tracker system tracks the position of the Sun and moves solar panels such that they align accurately with the position of the Sun.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Solar PV Tracker market covering all its essential aspects.
