Abstracts

A solar photovoltaic (PV) tracker is a device that orients solar panels or heliostats toward the Sun. A solar PV tracker is used in solar panels, heliostats, and parabolic troughs to align them in such a position toward the sun so as to collect solar energy in the most optimal angle, thereby increasing the efficiency of PV systems. Fixed-mounted solar panels may lose their efficiency when the Sun passes to the less than optimal angle. A solar tracker system tracks the position of the Sun and moves solar panels such that they align accurately with the position of the Sun.

Based on the Solar PV Tracker market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.
