Abstracts

Solid tires, which are also called airless tires, are manufactured using a few different methods. Solid tires can be manufactured on a frame or metal wheel structure which will then be mounted on a specific vehicle. Solid tires can also be made to fit on rims that are manufactured to support pneumatic tires. Solid tires differ in two ways. The first is the rubber compounds they're made with, and the second is the purposes they're made for. Solid-tire manufacturing results in tires that are incredibly hard and durable, bearing a slick tread design. Solid tires are also pliable and capable of performance at high speeds. These tires can even possess modern tread design and capability.

The Solid Tires market revenue was xx Million USD in 2016, grew to xx Million USD in 2020, and will reach xx Million USD in 2026, with a CAGR of xx during 2020-2026.
