## Abstracts

A polyurethane coating is a versatile product with many advantages upon other coating systems. A major disadvantage of classical, solvent based polyurethane coatings, are the volatile organic compounds (VOCs). Polyurethane (PUR and PU) is a polymer composed of organic units joined by carbamate (urethane) links. While most polyurethanes are thermosetting polymers that do not melt when heated, thermoplastic polyurethanes are also available.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Solvent Borne Polyurethane Coating Additives market covering all its essential aspects.
