Abstracts

Somatic testing assesses genetic material from the tumor and reports the variants present in cancer cells. Labs use existing databases and bioinformatics methods to identify likely germline variants, which they filter out of the results. This approach cannot definitively determine if a variant is germline or somatic. This type of testing requires a tumor sample. The goal of somatic testing is to identify options for genome-informed treatment. This report studies the global somatic genetic testing market.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Somatic Genetic Testing market covering all its essential aspects.
