Abstracts

A spark plug is an electrical device that is inserted into the cylinder of a spark-ignition engine to produce a spark at a specified time, igniting a mixture of combustible air and fuel in the cylinder bore. The device consists of a housing, resistors, electrodes and insulators. During engine operation, when a high-tension current flow through the central electrode, it ionizes the gas present between the electrode gaps and produces a spark. Modern spark plugs are designed to deliver a powerful ignition spark of about 500-3500 cycles per minute. The temperature at the tip of the spark plug is typically between 500°C and 800°C.
