Abstracts

The shotcrete/sprayed concrete is a special type of concrete, which with the help of a sealed and pressure-resistant hose is projected at a high velocity on the surface of the construction. Using water, the concrete mix is hydrated and is blown onto the substrate using a spraying nozzle. Compared to conventional concretes, the shotcrete/sprayed concrete has additional benefits, that is, they give high mechanical strength to the construction with long durability. The shotcrete/sprayed concrete has dense compaction and high compressive strength due to the low ratio of water and cement.
