Abstracts

The shotcrete/sprayed concrete is a special type of concrete, which with the help of a sealed and pressure-resistant hose is projected at a high velocity on the surface of the construction. Using water, the concrete mix is hydrated and is blown onto the substrate using a spraying nozzle. Compared to conventional concretes, the shotcrete/sprayed concrete has additional benefits, that is, they give high mechanical strength to the construction with long durability. The shotcrete/sprayed concrete has dense compaction and high compressive strength due to the low ratio of water and cement.

Based on the Sprayed Concrete market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.
