Abstracts

Starch blended biodegradable polymers are formed by combining starch and synthetic polymers. Currently, starch based polymers represent the second largest category of biodegradable polymers. These polymers are crystalline in nature, reasonably easy to process and may have starch content ranging from 10% to greater than 90%. In recent years, starch-based biodegradable polymers have gained prominence to a great extent. The lower price and greater availability of starch coupled with its environment-friendly profile has made it as a viable alternative to polymers based on petrochemicals.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Starch Blends market covering all its essential aspects.

For the competitive landscape, the report also introduces players in the industry from the perspective of the market share, concentration ratio, etc., and describes the leading companies in detail, with which the readers can get a better idea of their competitors and acquire an in-depth understanding of the competitive situation. Further, mergers & acquisitions, emerging market trends, the impact of COVID-19, and regional conflicts will all be considered.
