Abstracts

Starch blended biodegradable polymers are formed by combining starch and synthetic polymers. Currently, starch based polymers represent the second largest category of biodegradable polymers. These polymers are crystalline in nature, reasonably easy to process and may have starch content ranging from 10% to greater than 90%. In recent years, starch-based biodegradable polymers have gained prominence to a great extent. The lower price and greater availability of starch coupled with its environment-friendly profile has made it as a viable alternative to polymers based on petrochemicals. Based on the Starch Blends market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields. From the competitive advantages of different types of products and services, the development opportunities and consumption characteristics and structure analysis of the downstream application fields are all analyzed in detail. To Boost Growth during the epidemic era, this report analyzes in detail for the potential risks and opportunities which can be focused on.

In Chapter 2.4 of the report, we share our perspectives for the impact of COVID-19 from the long and short term.

In chapter 3.4, we provide the influence of the crisis on the industry chain, especially for marketing channels.

In chapters 8-13, we update the timely industry economic revitalization plan of the country-wise government.
