Abstracts

Stud welding is a powerful and reliable welding process for applying a single side fastener to a metal component, including stainless steel, mild steel, aluminium, aluminium alloy, and brass components. There are three main stud welding processes: capacitor discharge (CD), drawn arc (DA), and short cycle (SC). Each process is suited to particular materials and provides various capabilities, but all of these processes produce impressively strong and lasting results. Stud welding can be used for a diverse range of industries, from electrical and mechanical to decorative and consumer. Based on the Stud Welding Gun market development status, competitive landscape and development model in different regions of the world, this report is dedicated to providing niche markets, potential risks and comprehensive competitive strategy analysis in different fields.
