## Abstracts

Superalloy blisk is a kind of blisk made of superalloy material, typically titanium or a nickel based alloy. Superalloy blisk is a key component of the aero-engine. By designing the blades and discs of the traditional structure into a unitary structure, the boring head, the gutter and the locking device used in the traditional connection method are eliminated, the weight of the structure is reduced, the number of parts is reduced, and the number of parts is avoided. The loss of airflow greatly simplifies the overall structure of the engine, and the thrust-to-weight ratio and reliability are significantly improved.

The report combines extensive quantitative analysis and exhaustive qualitative analysis, ranges from a macro overview of the total market size, industry chain, and market dynamics to micro details of segment markets by type, application and region, and, as a result, provides a holistic view of, as well as a deep insight into the Superalloy Blisk market covering all its essential aspects.
